

TS Police Constable Preliminary Exam 2022 MODEL PAPER 4

Directions (Qs, 1 to 7): These questions are based on the following passage. Read the passage carefully to answer these questions:

The third great defect of our civilisation is that it does not know what to do with its knowledge. Science has given us powers fit for the Gods, yet we use them like small children. For example, we do not know how to man age our machines. Machines were made to be man's servants. Yet, he has grown so dependent on them that they are in a fair way to becoming his masters. Already most men spend most of their lives looking after and waiting upon machines. And the machines are very stern masters. They must be fed with coal, and given petrol to drink, and oil to wash with, and they must be kept at the right temperature. And if they do not get their meals when they expect them, they grow sulky and refuse to work, or burst with rage, and blow up, and spread ruin and destruction all round them. So, we have to wait upon them very attentively and do all that we can to keep them in a good temper. Already find it difficult either to work or play without the machines, and a time may come when they will rule us altogether, just as we rule the animals.

And this brings me to the point at which I ask "What do we do with all the time which the machines have saved for us, and the new energy they have given us? On the whole, it must be admitted, we do very little. For the most part we use our time and energy to make more and better machines; but more and better machines will only give us still more time and still more energy, and what are we to do with them? The answer, I think, is that we should try to become more civilised. For the machines themselves, and the power which the machines have given us, is not civilisation but aids to civilisation. But you will remember that we agreed at the beginning that being civilised meant making and liking

beautiful things, thinking freely, loving tightly, and maintaining justice equally between man and man. Man has better chance today to do these things than he ever had before; he has more time, more energy less to fear and less to fight against. If he will give his time and energy which his machine have won for him to making more beautiful things, finding out more and more about the universe, removing the causes of quarrels between nations, and discovering how to prevent poverty, then I think our civilization would undoubtedly be greater, as it would be the most lasting than that has ever been

1. The advantage of having so many machines is
