## ENGLISH LANGUAGE

**Directions (71-78):** Read the following passage carefully and answer the questions given below them.

Animals of all sorts live together in various ecosystems. Within these natural communities, the animals eat specific diets that connect them together in a food chain. The three diets of animals include creatures that eat only plants, those that eat only meat, and animals that eat both plants and meat. Animals that eat plants exclusively are herbivores, and animals that eat only meat are carnivores. When animals eat both plants and meat, they are called omnivores. The balance of an ecosystem depends on the presence of every type of animal. If one type of animal becomes too numerous or scarce, the entire balance of the ecosystem will change.

Carnivores will feed on herbivores, omnivores, and other carnivores in an ecosystem. A natural community depends on the presence of carnivores to control the populations of other animals. Large carnivores include wolves and mountain lions. A large carnivore might hunt down large herbivores such as elk and deer. Medium-sized carnivores include hawks and snakes, and these animals typically feed on rodents, birds, eggs, frogs, and insects. Examples of small carnivores include some smaller birds and toads. These carnivores may eat insects and worms. Carnivorous animals have strong jaws and sharp teeth to enable them to tear and rip prey. These animals often have long, sharp claws that they also use to tear prey. Carnivores depend on sufficient prey in the food chain to give them the food they need. If the herbivore population or the population of other carnivores declines in an ecosystem, carnivores may not survive.

With a diet comprised of only plants, herbivores can be surprisingly large animals. Examples of large herbivores include cows, elk, and buffalo. These animals eat grass, tree bark, aquatic vegetation, and shrubby growth. Herbivores can also be medium-sized animals such as sheep and goats, which eat shrubby vegetation and grasses. Small herbivores include rabbits, chipmunks, squirrels, and mice.

These animals eat grass, shrubs, seeds, and nuts. An ecosystem must provide \_\_\_\_\_(1) plants to sustain herbivores, and many of them spend the majority of their lives eating to stay alive. If plant availability declines, herbivores may not have enough to eat. This could cause a decline in herbivore numbers, which would also impact carnivores. Herbivores usually have special biological systems to digest a variety of different plants. Their teeth also have special designs that enable them to rip off the plants and then grind them up with flat molars.

Omnivores have an advantage in an ecosystem because their diet is the most diverse. These animals can vary their diet depending on the food that is most plentiful, sometimes eating plants and other times eating meat. Herbivores have different digestive systems than omnivores, so omnivores usually cannot eat all of the plants that an herbivore can. Generally, omnivores eat fruits and vegetables freely, but they can't eat grasses and some grains due to digestive limitations. Omnivores will also hunt both carnivores and herbivores for meat, including small mammals, reptiles, and insects. Large omnivores include bears and humans. Examples of medium-sized omnivores include raccoons and pigs. Small omnivores include some fish and insects such as flies. Omnivore teeth often resemble carnivore teeth because of the need for tearing meat. Omnivores also have flat molars for grinding up food.

71. Why the balance of the ecosystem depends on each kind of animal?

- (a) Scarcity or abundant of a single kind can cause disturbance in the ecosystem balance.  
 (b) Carnivores and Omnivorous should be less in number than herbivorous.  
 (c) Specific diets of each kind of animals bring food chain in sync.  
 (d) Both (b) and (c)  
 (e) None of these

72. How natural community depends upon Carnivores?  
 (a) They feed on grass eating, plant and meat eating animals.  
 (b) They feed on other carnivores.  
 (c) They control populations of other animals.  
 (d) All (a), (b), and (c)  
 (e) None of these
73. What is the threat to survival of carnivores?  
 (a) Insufficient number of preys in the food chain.  
 (b) Decline in population of herbivores and other carnivores  
 (c) Both (a) and (b)  
 (d) Only (b)

\_\_\_\_\_ (79) but accidents continue to occur. Funds from the Centre flow smoothly though procurement of food items faces hurdles of different kinds. The latest \_\_\_\_\_ (80) in mid-meal stories concerns milk. Government norms entitle every child to receive 150 ml of milk as part of the mid-day meal. However, a video revealed recently how one litre of milk was mixed in a bucketful of water so that it would \_\_\_\_\_ (81) for the more than 80 children present that day in a school in rural Uttar Pradesh (U.P.). The two videos made it to the national media; they also proved useful for the officers who \_\_\_\_\_ (82) the mid-day meal scheme since they also depend on unauthorised videographers to learn about the reality in schools. Each such revelation leads to the same \_\_\_\_\_ (83) official statement: punish the guilty, locate the video-maker and deal with him/her. In the latest mid-meal story narrated above, authorities in U.P. have reportedly done the \_\_\_\_\_ (84) needful, i.e. they have fired the apparent culprit who is a para-teacher.

71. (a); Refer to the first paragraph. The hint can be drawn from the lines, 'The balance of an ecosystem depends on the presence of every type of animal. If one type of animal becomes too numerous or scarce, the entire balance of the ecosystem will change.'  
In this way, **option (a)** is justified with the given lines. Hence, it is the correct answer choice.
72. (d); Refer to the second paragraph. The hint can be drawn from the lines, 'Carnivores will feed on herbivores, omnivores, and other carnivores in an ecosystem. A natural community depends on the presence of carnivores to control the populations of other animals.'

73. (c); Refer to the last part of second paragraph. The hint can be drawn from the lines, 'Carnivores depend on sufficient prey in the food chain to give them the food they need. If the herbivore population or the population of other carnivores declines in an ecosystem, carnivores may not survive.'  
From these lines, both **option (a) and (b)** are justifies. Hence, **option (c) [Both (a) and (b)]** is the right answer choice.

**Option (b):** An ecosystem must provide abundant plants to sustain herbivores  
**Option (c):** many of them spend the majority of their lives eating to stay alive  
**Option (d):** Herbivores usually have special biological systems to digest a variety of different plants.  
Hence, **option (e), [All of the above]** is the right answer choice.
75. (b); Refer to the fourth paragraph. The hint can be drawn from the lines:  
**Option (a):** Omnivores have an advantage in an ecosystem because their diet is the most diverse.  
**Option (c):** These animals can vary their diet depending on the food that is most plentiful, sometimes eating plants and other times eating meat.  
Hence, **option (b), [Both (a) and (c)]** is the right answer choice.
76. (b); **Abundant** can fill in the blank (1) to make the sentence grammatically and contextually correct. Hence, option (b) is the right answer choice.

85. (b); From the given options, (i) will make the given sentence grammatically incorrect whereas option (iii) is out of context. So, only 'Transitioning' will fit the given blank to make the given sentence both grammatically and contextually correct. Hence, the correct answer choice would be option (b)
